The background of the page features a large, semi-transparent image of a wind turbine in the upper half and a dense line of green trees in the lower half, creating a clean, modern, and eco-friendly aesthetic.

INTRODUCTION

In our persistent efforts to foster a thriving green economy in Jordan, our unwavering dedication finds its roots in the collective strength of the human capital within EDAMA board of directors and staff. Fueled by this synergy, we rise to greater achievements with the steadfast support of our extensive network of passionate members and stakeholders.

Year after year, the green sector strides ever closer to achieving both national and international environmental milestones. Our shared commitment is directed towards fostering a healthier environment and reaping the socioeconomic benefits that follow. In contribution to this vision, we play a key role by raising awareness on critical issues within the sector. Our efforts extend to facilitating an open dialogue between the public and private sectors, advocating for change, spearheading significant projects, and, most significantly, through our dynamic network comprising organizations across the entire value chain.

Within the confines of this report, we proudly showcase EDAMA's achievements for the year 2025.

NOTE FROM THE CHAIRMAN

EDAMA for Energy, Water and Environment has been proudly entrusted by the private sector since 2009. In the past decade, EDAMA was able to fulfill and excel at providing necessities for its members in the Jordanian Market.

We further ensured rein-forcing our solid position to fuel Jordan's green economy, by bridging the gap between the public and the private sectors to achieve sustainability.

Many issues were brought to our attention and actively tackled in the last year by EDAMA Association and its members, who were actively engaged in terms of advocacy, communication, and networking.

Numerous projects were kicked off which serve different sectors such as supporting circular economy opportunities, youth and women empowerment, waste management, awareness raising of environmental and sustainability issues, and renewable energy.

EDAMA Association continued its relentless efforts to develop a permanent dialogue with the sector regulators to ensure the support of the private sector and the enhancement of the investment environment as a whole.

EDAMA, always looks forward to continuing supporting the energy, water, and environment sectors, strengthening the role of business community, and working with our members to build on what has been achieved and move on towards enhancing Jordan's status on the green economy map.

MEMBERSHIP

Over the past year, EDAMA implemented several initiatives to better understand and support its members. A member survey was conducted to assess needs and satisfaction with EDAMA's services and activities, and the results were analyzed to generate insights that informed improvements to its offerings.

In parallel, EDAMA strengthened its communication efforts by initiating a comprehensive update of member data and contact information. This ongoing process aims to ensure accurate records and more effective communication channels.

To enhance member engagement, EDAMA invited members to participate in various projects implemented throughout the year and shared relevant publications to provide added value and sector-specific knowledge.

As part of its engagement strategy, EDAMA also launched the "Featured Members" campaign to showcase members' achievements in the energy, environment, and water sectors. The initiative received strong positive feedback, increasing member visibility and fostering a stronger sense of community within the network.

EVENTS

01. Training of Trainers for Gender-Sensitive Support

February 8-11, 2025

EDAMA concluded a four-day in-person training held from February 8–11, 2025, as part of the Women on the Green Path project. The BSOs Academy: Empowering Green Champions brought together Business Support Organizations (BSOs) to strengthen their capacity to support women entrepreneurs in the green and circular economy.

PUBLICATIONS

01. License Fees System No. (17) of 2025 – Amendment to the Electricity Licensing Fees System

This publication presents EDAMA's position on the amendment to the electricity licensing fees system. It aligns with Jordan's Economic Modernization Vision (2023–2033) prioritizing the energy sector as a key pillar for sustainable development and national competitiveness.

[Read More](#)

02. Comments on the Regulations and Instructions Derived from the Public Electricity Law No. 10 of 2025

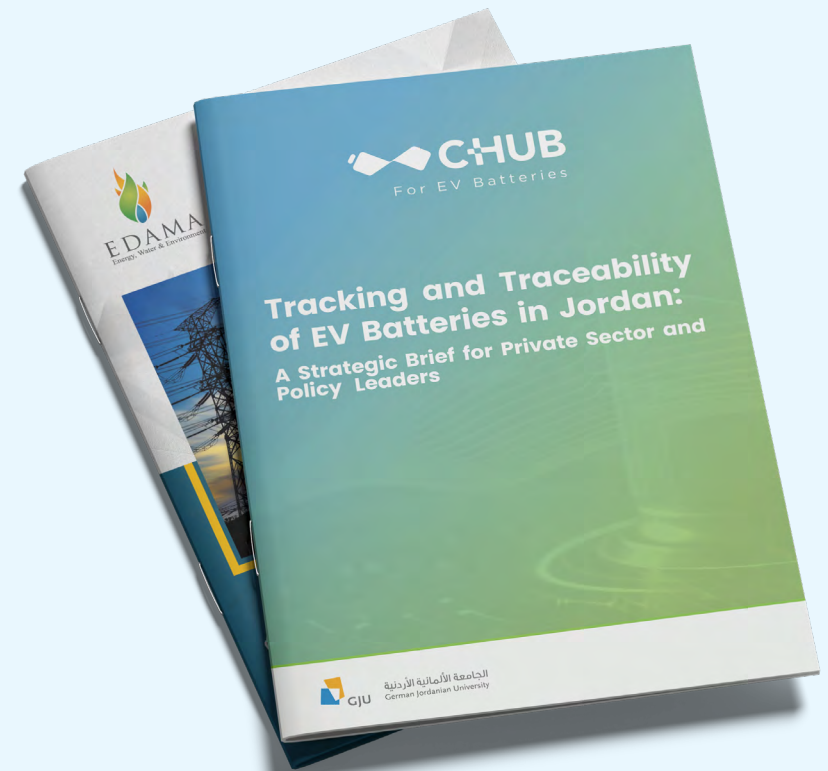

This report contains EDAMA's comprehensive review of draft regulations prepared by the Ministry of Energy and Mineral Resources following the Public Electricity Law No. (10) of 2025. It includes practical observations and recommendations aimed at improving the sector's legislative and regulatory framework to support a green and competitive economy.

EDAMA Plays a Leading Role in Establishing a Joint Technical Committee on Energy Storage and Electricity Regulation

EDAMA engaged with key regulatory and legislative authorities in Jordan to discuss the development of energy storage systems and recent updates to electricity sector regulations. These engagements included the establishment of a joint technical committee with the Energy and Minerals Regulatory Commission on June 18, tasked with examining technical aspects of energy storage, grid stability, and tariff structures. Following the committee's first meeting on July 17, a draft Memorandum of Understanding (MoU) was prepared to establish a framework for institutional collaboration within Jordan's energy sector.

In parallel, EDAMA briefed the Parliament's Energy Committee on challenges facing renewable energy companies, including regulatory changes and licensing fees. EDAMA also submitted recommendations on draft electricity regulations to support sector sustainability and enhance regulatory clarity. Collectively, these activities demonstrate EDAMA's ongoing role in facilitating dialogue between the private sector, regulators, and policymakers to address energy sector challenges and support effective policy development.

PROJECTS

Green Links

This project promoted sustainable resource management in Azraq Camp and Zarqa, Jordan. It engaged Jordanians and Syrian refugees in organic farming, organic compost production, and provided training on solar panel installation and maintenance. The project achieved its goal of fostering an integrated energy-water-food nexus approach using circular economy strategies, technology-driven solutions, and community involvement.

Target Groups and Impact:

- Benefited local communities including Syrian refugees and Jordanians.
- Engaged environmental agencies, financial institutions, business development organizations, and public/private sectors.
- Involved young innovators and entrepreneurs in green technology contributing to project implementation.

Women on the Green Path

This project empowered women in Jordan, Tunisia, and Morocco through sustainable practices and green initiatives, enhancing their roles in energy, water, and agriculture sectors. Training, entrepreneurship support, and workshops were delivered

Achieved Results:

- 60 women entrepreneurs benefited from a comprehensive acceleration program.
- 15 women entrepreneurs received adapted service packs.
- 15 women entrepreneurs participated in mentoring programs to reinforce and implement their businesses.

CONTINUED PROJECTS

Gender Task Force

The project aimed to strengthen gender equality and enhance women's participation in Jordan's energy sector through evidence-based analysis and structured dialogue.

It combined a national gender assessment with multi-stakeholder engagement activities involving public institutions, the private sector, academia, civil society, and women professionals.

The process identified policy gaps and sector challenges, which were analyzed and prioritized through facilitated workshops.

Participants co-developed practical, policy-aligned tools and recommendations, validated through a technical roundtable.

The project delivered actionable outputs to support improved policy implementation and institutional practices in the energy sector.

CONTINUED PROJECTS

Circularity Hub for Spent EV Batteries

The Circularity Hub (C-Hub) was launched on November 5, 2023, at the German Jordanian University (GJU) in collaboration with the EDAMA Association, with support from the German Agency for International Cooperation (GIZ) through the Green Action in Enterprises (GAIN) project. As the first initiative of its kind in Jordan, the C-Hub focuses on the sustainable end-of-life management of electric vehicle (EV) batteries.

The C-Hub aims to establish a robust ecosystem for the sustainable management of EV batteries by fostering collaboration among public, private, and academic stakeholders, thereby strengthening Jordan's role in the circular economy. In addition, the hub supports applied research and innovation in battery recycling, contributing to the development of technical skills and local capacities essential for long-term sustainability.

CONTINUED PROJECTS

Capacity Building and Institutionalization of the National Sector Skills Council for Water & Energy (WE Skill)

This project aims to strengthening the capacity Building and institutionalization of the National Sector Skills Council in Water and Energy by building institutional frameworks supporting skill development, training council members, and improving marketing and fundraising for sustainability and effectiveness.

1. Operational Support: Prepare EDAMA Association to host and operationalize the WE SKILL Secretariat.
2. Advisory Services: Secure consulting support for marketing, sectoral strategies, and fundraising to establish WE SKILL's functions within EDAMA.
3. Capacity Building: Strengthen the capabilities of EDAMA's team and WE SKILL members to perform their duties effectively.
4. Awareness Raising: Organize workshops, seminars, and fundraising events to promote WE SKILL.

CONTINUED PROJECTS

Mediterranean Waste Innovations for Sustainable Environments (MEDWISE)

The project strengthens research and innovation in the Mediterranean region by supporting advanced waste management technologies and fostering cross-border academic, research, and business collaboration through technology transfer and knowledge exchange.

The Mediterranean grapples with waste management issues, with most municipal waste ending up in landfills untreated. Organic waste, a major component and a valuable source of energy and nutrients, is often contaminated, rendering it inadequate for use. Although a circular economy is needed to address this, the region faces inconsistent variations in legislative, technical, and funding gaps that hinder the implementation of circular strategies.

Promoting circular valorization of WEEE waste (waste for electrical and electronic equipment) (WEEValue)

WEEE VALUE is a transnational project funded under the Interreg NEXT MED Programme, working to advance circular solutions for waste electrical and electronic equipment (WEEE) across the Mediterranean region.

The project addresses the rapidly growing e-waste challenge by supporting better collection systems, innovative circular business models, and stronger local and regional policies, with a focus on reducing environmental harm and turning waste into value.

The project delivers its impact through three complementary solutions:

1. WEEE AWARE: Raising awareness
2. WEEE SOCIAL: Promoting social and inclusive e-waste models
3. WEEE COLLECT: Improving digital collection tools
